## ASDI Block Program FAQ

Since the President signed the Department of Transportation's Fiscal Year 2012 Appropriations Bill, H.R. 2112, on November 18th, 2011, the Federal Aviation Administration (FAA) has received questions regarding its implementation of the blocking request options now available for the FAA's Aircraft Situation Display to Industry (ASDI) and National Airspace System Status Information (NASSI) data feeds. This Q&A responds to some of those questions. Please note that the FAA has published a Notice of Interim Policy on Limiting Aircraft Displayed Via ASDI, which provides further information on the FAA's recent program changes. You can find this notice at 76 Fed. Reg. 78,328 (Dec. 16, 2011).

**1. Question: Who may request to block an aircraft from the ASDI data feeds?**

**Answer**—Any aircraft owner or operator may request blocking of their aircraft's identification number from any display of the FAA's ASDI data that is made available to the public with the exception of data made available to a Government agency, for the noncommercial flights of that owner or operator.

**2. Question: What levels of blocking are available?**

**Answer**—All requests should specify whether the owner or operator wants to block the aircraft's identification: 1) at the FAA source prior to the FAA's release of the data feed; or 2) after the FAA's release at the ASDI Subscriber or Industry level. Should a specific request not be made, the FAA will block the aircraft identification prior to the FAA's release of the data to Industry subscribers.

**3. Question: When should I submit my request and when will it be effective?**

**Answer**—The FAA implements the updated Block Lists on the first Thursday of every month. Requests received by the 15<sup>th</sup> of the month are likely to be included in the next update.

**4. Question: Does the FAA have a standardized format for submitting a blocking request or its annual renewal?**

**Answer**—No; however, to ensure that the FAA has enough information to act on a blocking request, an aircraft owner or operator should specify:

- the aircraft registration number(s) to be blocked;
- a statement that the requestor is the owner or operator of the specified aircraft; and
- the level of blocking that is requested, specifically:
  1. block at the FAA Source level, or
  2. block at the Industry level

In addition, providing contact information, such as email address, regular mail address, and telephone number will assist the FAA in processing requests more quickly. The FAA may consider other requirements when it establishes more specific procedures in the future.

**5. Question: Does the FAA require an annual update?**

**Answer**—The FAA does not require an annually updated request at the present time; however, the FAA may consider such a requirement when it establishes more specific procedures in the future.

**6. Question: What is the status of any existing block aircraft requests, based on a Certified Security Concern?**

**Answer**—Until the FAA publishes more specific procedures, aircraft that are currently on the block list based on a Certified Security Concern will continue to be blocked at the same level as originally requested

**7. Question: How can I remove a block or change the level of blocking?**

**Answer**—The owner or operator of an aircraft can ask the FAA to remove the block or change the level of blocking at any time. To effect this change, the FAA requires the same information specified in question 4, above. In addition, the change will take effect on the schedule specified in question 3, above.

**8. Question: Where should I submit my blocking request?**

**Answer**—For quickest processing, requestors are strongly encouraged to submit their requests for blocking via email at [CertifiedSecurityConcern@faa.gov](mailto:CertifiedSecurityConcern@faa.gov)

Hard copy requests may be submitted by regular mail at: FAA ASDI Blocking Request; ATO System Operations Services, AJR-0; Wilbur Wright Building, Room 3E1500; 600 Independence Avenue, SW; Washington, DC 20597. The requestor should expect additional delivery and processing time for regular mail submissions.

The FAA prefers that requestors do not submit blocking requests via both methods.
